**GLOBAL, REGIONAL AND**  
**NATIONAL CONTEXT**

## AREA OF PHYSICAL CONDITIONS FAVORABLE FOR COCA GROWING WORLDWIDE

The following graph shows the favorable world geographical area for the existence of coca crops, however, the world production of cocaine is found in the South American Andean Region in the countries of **Colombia, Peru and Bolivia**.

Image 1. Source UNODC 2020

### COCA CROPS IN THE ANDEAN REGION

The cultivation of coca worldwide according to the last year with which annual census information is available for the three countries is concentrated in **Colombia** (66%), **Peru** (23%) and **Bolivia** (11%) out of a total of 234,630 ha in 2019.

country	SIMCI detection (ha)	Variation from previous measurement (2020 vs 2019)	Cocaine production potential tm
Colombia	154.475	9% reduction	1.137 tm
Peru	54.655	1% increase	400 tm
Bolivia	25.500	10% increase	It is in the process of productivity studies

Table 1. Colombia data taken from the 2019 UNODC coca cultivation monitoring report  
Peru data from the 2019 monitoring report (DEVIDA)  
Bolivia data taken from the 2018 coca cultivation report. UNODC

## EXPANSION OF ILLICIT CROPS, A REGIONAL THREAT

Some illicit coca crops have been detected by the control authorities in both South and Central America, which represents a serious regional threat from the expansion of criminal organizations dedicated to drug trafficking.

El hallazgo de 700 hectáreas de cultivos de hoja de coca no debe ser pasado por alto como un dato menor: las provincias de Esmeraldas, Carchi y Sucumbios estarían en la capacidad de producir aproximadamente a 230 kilogramos de cocaína por cada cosecha. Foto Referencial. Reuters

## COCA CROPS IN COLOMBIA

In Colombia, 154.475 coca crops have been detected; there are 20 departments affected with these crops, however, the concentration of these illicit crops is found in 10 departments. The illicit coca crops detected in Colombia in 2019 showed a reduction of 9% compared to what was detected in 2018.

### TOP 10 departments most affected by coca crops

**INFRASTRUCTURES**

## DYNAMICS OF COCAINE PRODUCTION IN COLOMBIA

The following aspects influence the estimation of cocaine production in Colombia: (I) establishment of the coca production area measured in hectares, (II) capacity of the production area, (III) capacity to extract the alkaloid, (IV) crystallization. The process is described as follows:

Image 3. Source UNODC 2020

## COCAINE PRODUCTION POTENTIAL

The detection of coca crops in Colombia corresponds to 154 thousand hectares, taking into account this information which is provided in the monitoring report of territories affected by illicit crops, reflects the results and the margins of the production potential of cocaine hydrochloride.

Taking into account technical scientific studies developed by different institutions in the country in relation to the productivity of coca cultivation, which are verified through theoretical practical methodologies, the production potential of cocaine hydrochloride is determined.

## COCAINE PRODUCTION POTENTIAL IN COLOMBIA

Elaboration: CIENA - DIRAN

Defining the productivity of a region through its verification of crops determines what its production capacity is, in this way containment programs are carried out, sectorize the most complex areas to formulate strategies that lead to mitigate their growth, these actions directly affect in the variations of the figures of the crops and the census through permanent analysis is of vital importance to determine its impact.

## COCAINE PRODUCTION POTENTIAL IN THE REGIONS OF COLOMBIA

The information for each of the Antinarcotics Regions is presented below, determined from the yield of the coca leaf, the number of crops per year, the production potential of cocaine base and cocaine hydrochloride.

Taking into account the participation of the most affected actors, thus determining an accompaniment that is evident with the objective of a verification based on the different strategies.

For this reason the traits are determined and the characteristics of the sowing, transformation of the coca leaf and the obtaining of cocaine hydrochloride are established.

**Average harvests of coca leaf cultivation / hectare / year:** 4.2 harvests per year

**Average yield of leaf kilogram / hectare / year:** 5.8 tm per year

**Total potential coca leaf production per year:** 993,100 mt per year

**Average yield of cocaine base per hectare per year:** 8.3 kg / ha / year

**Total potential for cocaine base production:** 1,421 mt per year

**Average yield of cocaine hydrochloride per hectare per year:** 6.7 kg / ha / year

**Total production potential of cocaine hydrochloride:** 1,137 mt per year

Concept	Reg. 1	Reg. 2	Reg. 3	Reg. 4	Reg. 5	Reg. 6	Reg. 7	Reg. 8

## SEIZURES 2020

### SOLID CHEMICALS

### LIQUID CHEMICALS

## ESSENTIAL CHEMICAL SUBSTANCES FOR THE PRODUCTION OF COCAINE HYDROCHLORIDE

In order to control beyond the incidence of the eradication of illicit crops, the National Police in application of Resolution 001 of January 8, 2015 issued by the National Narcotics Council - CNE, generates control and ban on 33 chemicals and substances.

**Coca base leaf**

- Cement
- Urea
- Sodium hydroxide
- Gasoline
- Sulfuric acid
- Ammonia

**Reoxidized base**

- Potassium permanganate
- Sodium bisulfite

**Cocaine hydrochloride base**

- Ethyl acetate
- Isopropyl alcohol
- Methyl ethyl ketone
- Activated carbon
- Calcium chloride
- Hydrochloric acid

CIENA source. Chemicals used in the production of Cocaine

The following have been identified as essential chemicals in the cocaine hydrochloride production processes:

- *Coca-based leaf: Sulfuric acid*
- *Reoxidized base base: Potassium permanganate*
- *Cocaine hydrochloride base: Hydrochloric acid*

Likewise, cement, gasoline and ACPM are controlled within the 10 departments with the greatest impact on illicit crops according to the SIMCI annual report, which for 2020 were: Norte de Santander, Nariño, Putumayo, Cauca, Antioquia, Bolívar, Caquetá, Guaviare, Córdoba and Valle del Cauca.

## DRUG PROCESSING INFRASTRUCTURES

The production of illicit drugs is carried out through processing infrastructures, which have basic elements and rudimentary adaptations for the development of the different processes of transformation of alkaloids and obtaining essential chemical substances.

**Extraction infrastructure (cocaine base paste):** These are those where the alkaloid extraction process begins, starting from the fresh or dry leaf, these infrastructures are known in criminal slang as **cocinas, chagras, chongos**, etc. It consists of a structure made of wood and plastic, on some occasions they have been found fitted out as homes and are close to illicit crops.

**Reoxidation and conversion infrastructure (cocaine hydrochloride):** In some regions of the country, it has been evidenced, the separation of re-oxidation and conversion infrastructures, given the dynamics of cocaine base traffic, the infrastructure of reoxidation as an intermediate process for homogenization of the alkaloid before entering the conversion process, however, it is not a generality. The elements that can be found are: **filter machines, worms or water bath, microwave ovens, rustic filter machines, filter paper and labels.**

**Infrastructures for the artisanal production of chemical substances:** The infrastructures for the illicit production of chemical substances are increasingly being found; the substances produced in these infrastructures are used as a method of selfsufficiency by drug trafficking structures, as opposed to controls by national authorities. Infrastructures for obtaining sulfuric acid, hydrochloric acid and potassium permanganate, substances characterized as essential for the processing of cocaine hydrochloride, have been characterized through antinarcotic interventions.

### Drug processing infrastructures destroyed National Police 2018 - 2020

TYPE OF INFRASTRUCTURE	2018	2019	2020
Extraction (cocaine base paste)	1.708	2.142	2.391
Reoxidation and conversion (cocaine hydrochloride)	159	144	120
Chemical production infrastructures	8	19	11

El laboratorio de cocaína fue descubierto en Copán

Una aparente fábrica de cocaína, descubierta en Honduras por la policía, fue parcialmente destruida después de que el sitio fuera dejado sin vigilancia. El laboratorio puede ser un indicio de que la producción de cocaína se está moviendo hacia el norte, mientras que su destrucción es un recordatorio de la corrupción y la ineficiencia que enfrenta el nuevo presidente de línea dura de Honduras.

Autoridades dominicanas excavan el laboratorio subterráneo

Las autoridades de República Dominicana han descubierto un laboratorio de drogas descrito como el más grande encontrado en el Caribe, lo que respalda las sugerencias de que la región está nuevamente ganando importancia para los narcotraficantes que responden a los esfuerzos antidrogas en Centroamérica.

La policía descubrió un laboratorio de cocaína subterráneo, así como 230 kilogramos de cocaína, en los terrenos de una lujosa propiedad en el municipio de San Cristóbal, al sur del país, informó El Nuevo Diario.

El Mundo 11 ago. 2020 - 11:08 a. m.  
Por: Redacción Internacional

Las autoridades detuvieron a 17 sospechosos durante la operación antidrogas: 13 colombianos, tres holandeses y un turco. El laboratorio tenía la capacidad para producir de 150 a 200 kilogramos de cocaína por día. Según la policía, este es el centro de producción de droga más grande encontrado en el país.

# **TRAFFIC OF COCAINE HYDROCHLORIDE SEIZURES**

## TRAFFIC OF COCAINE HYDROCHLORIDE

According to the seizures made in the 2019 and 2020 terms, it was determined that the traffic routes (air, land and sea) totaled 286,848 kilograms seized; being countries of consumption such as China, Spain, Belgium, Germany, Italy, United States and Chile; Countries of transit Brazil, Venezuela, Ecuador, Panama, Puerto Rico, Honduras, Guatemala and Mexico and lastly producing countries, Colombia, Peru and Bolivia.

Among the destinations with the highest seizure cases, the following countries were found: **Panama** with 73,431.6 kilograms, **Ecuador** with 48,719.1 kilograms, **Costa Rica** with 44,815.7 kilograms, **Spain** with 21,021.7 kilograms and finally **Mexico** with 19,443.4 kilograms.

Similarly, the countries of Spain, Central America and Mexico serve as a transit platform.

## TRAFFIC MODALITIES

Below are some forms of cocaine trafficking used by criminal organizations.

### AIRCRAFT

### BOATS

### VEHICLES

### MACHINERY

### TORPEDOS / SEMI SUBMERGIBLES

### PHYSICAL ADULTERATION

## SEIZURES

The National Police during the 2019 and 2020 periods made a total seizure of 616,944 kilograms of Cocaine Hydrochloride and Cocaine Base, where in 2019 301,491 kg were seized and 315,452 kg in 2020.

### SEIZURE OF COCAINE HYDROCHLORIDE AND COCAINE BASE 2019 - 2020 (kilograms)

Image 5. Prepared by CIENA, Source SIEDCO DIRAN

For the year 2020, the five departments with the highest seizures were in order: Valle del Cauca (61,357 kg), Nariño (36,757 kg), Norte de Santander (33,423 kg), Chocó (28,946 kg) and La Guajira ( 28,096 kg).

Similarly, for the year 2019, the five departments with the highest seizures were in order: Nariño (77,790 kg), Valle del Cauca (43,222 kg), Norte de Santander (38,283 kg), Antioquia (26,021 kg) and Bolívar (22,388 kg).

# **COCAINE PRICE DYNAMICS** **AT NATIONAL AND** **INTERNATIONAL LEVEL**

The distribution and commercialization of drugs requires diverse activities, actors and organizations, with profit margins and an incentive system that make criminal activity a profitable business.

The National Police of Colombia has determined to evaluate the incidence of prices in the 8 regions, where those departments of production, manufacturing and consumption are established, in order to identify market and production dynamics.

## PRICES AT REGIONAL LEVEL

## PRICE OF COCAINE HYDROCHLORIDE AND COCAINE BASE PER KILOGRAM IN COLOMBIA

	Cocaine base (Price kilogram)	Cocaine hydrochloride (Price kilogram)
	Colombian pesos	Colombian pesos
<b>REGION 1</b>	\$2.900.000	\$6.700.000
<b>REGION 2</b>	\$2.250.000	\$3.250.000
<b>REGION 3</b>	\$2.800.000	\$4.900.000
<b>REGION 4</b>	\$2.366.667	\$4.133.333
<b>REGION 5</b>	\$3.100.000	\$5.766.667
<b>REGION 6</b>	\$3.066.666	\$3.337.500
<b>REGION 7</b>	\$3.260.000	\$5.133.333
<b>REGION 8</b>	\$2.175.000	\$4.940.000

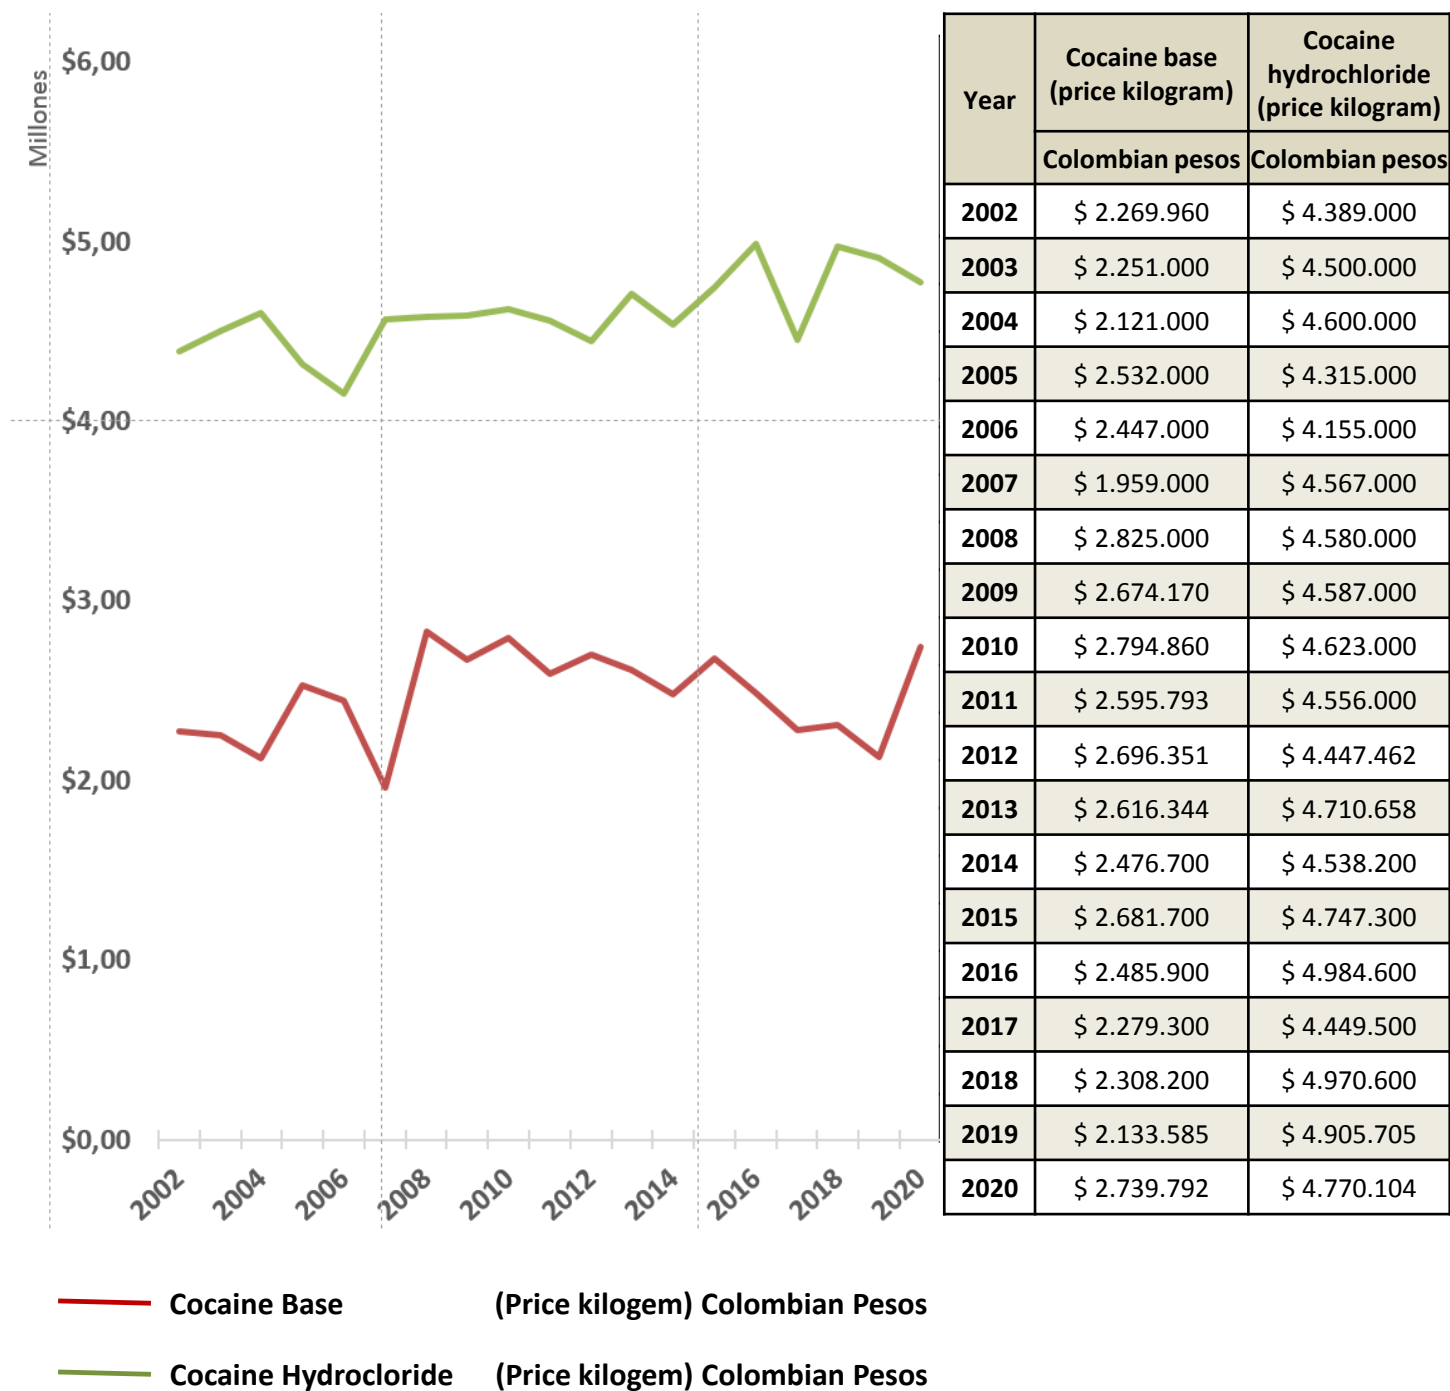

Source: CIENA - DIRAN

### Attention factors:

- The highest value of the kilogram of cocaine hydrochloride is found in **Region 1**, reaching \$ 6,700,000, it is important to mention that **San Andrés and Providencia** are in this jurisdiction, which has been identified as an exit platform for Europe and Africa, in the same way it presents an international airport (Gustavo Rojas Pinilla) being a place of transit in tourism for Central and South America.
- Another trend in cocaine hydrochloride prices is reflected in those regions that have **border departments** where its value per kilogram ranges from \$ 4,133,333 to \$ 5,766,667.
- The cocaine base has maintained a stabilization that ranges from \$ 2,175,000 to \$ 3,260,000 per kilogram in the 8 regions.

## HISTORICAL SERIES OF COCAINE BASE AND COCAINE HYDROCHLORIDE PRICES IN COLOMBIA 2002 - 2020

The historical prices of cocaine base and cocaine hydrochloride between 2002 and 2020 maintain a stable average trend, where there are no significant changes.

## Illicit drug price fluctuation dynamics (2019 – 2020)

	2019	2020
Coca leaf	\$ 25.817 <i>11,502 kg</i>	\$ 56.952 <i>11,502 kg</i>
Cocaine base	\$ 2.014.651 <i>kg</i>	\$ 2.739.762 <i>kg</i>
Cocaine hydrochloride	\$ 4.760.828 <i>kg</i>	\$ 4.770.104 <i>kg</i>
Heroin	\$ 17.651.389 <i>kg</i>	\$ 17.594.875 <i>kg</i>
Marijuana	\$ 258.269 <i>kg</i>	\$ 427.000 <i>kg</i>
Ecstasy	\$ 35.000 <i>dose</i>	\$ 36.639 <i>dose</i>
2CB	\$ 80.000 <i>dose</i>	\$ 89.361 <i>dose</i>
LSD	\$ 30.167 <i>dose</i>	\$ 38.131 <i>dose</i>

Prices are calculated in Colombian pesos, at the average sale in Colombian territory

## Illicit drug price fluctuation dynamics First Semester (2019 - 2020)

	2019	2020
Coca leaf	USD \$ 8 <i>11,502 kg</i>	USD \$ 16 <i>11,502 kg</i>
Cocaine base	USD \$ 629 <i>kg</i>	USD \$ 798 <i>kg</i>
Cocaine hydrochloride	USD \$ 1.485 <i>kg</i>	USD \$ 1.389 <i>kg</i>
Heroin	USD \$ 5.507 <i>kg</i>	USD \$ 5.125 <i>kg</i>

LSD	USD \$ 9 <i>dose</i>	USD \$ 11 <i>dose</i>

Average sales prices in the Colombian territory,  
calculated with the Representative Market Rate (TRM)

31/12/2019	31/12/2020
\$3.205 COP	\$3.432 COP

## List of prices of illicit drugs in countries of transit, destination or consumption 2020

### Attention factors:

- The commercialization of cocaine with higher sales prices ranges from \$ 40,600 to \$ 210,000 USD per kg., where the markets of Australia, Austria, Croatia, Germany, Italy and the UK stand out.
- Traditional markets are observed with medium-high sales prices ranging between \$ 30,500 USD to \$ 39,538 USD per kg. of the drug, among these ranges we find countries such as the Netherlands, Portugal, Spain, Canada, Slovenia, France, the U.S and Belgium.
- Finally, in the ranges of \$ 1,375 USD to \$ 17,500 USD whose commercialized prices have been reported in the countries of Colombia, Ecuador, Panama, Chile, Brazil, Costa Rica, the Dominican Republic and Mexico, are the countries of production and transit.

Country	Cocaine kg Price USD
Australia	210.000
Austria	45.600
Croatia	45.200
Germany	42.900
Italy	42.900
UK	40.600
Holland	39.536
Portugal	39.536
Spain	39.500
Canada	37.210
Slovenia	37.200
France	35.017
U.S	32.000
Belgium	30.500
Mexico	17.500
Dominican Republic	11.000
Costa Rica	8.000
Brazil	7.000
Chile	7.000
Panama	6.000
Ecuador	4.500
Colombia	1.375
